

Remote Desktop/Using the Windows Server

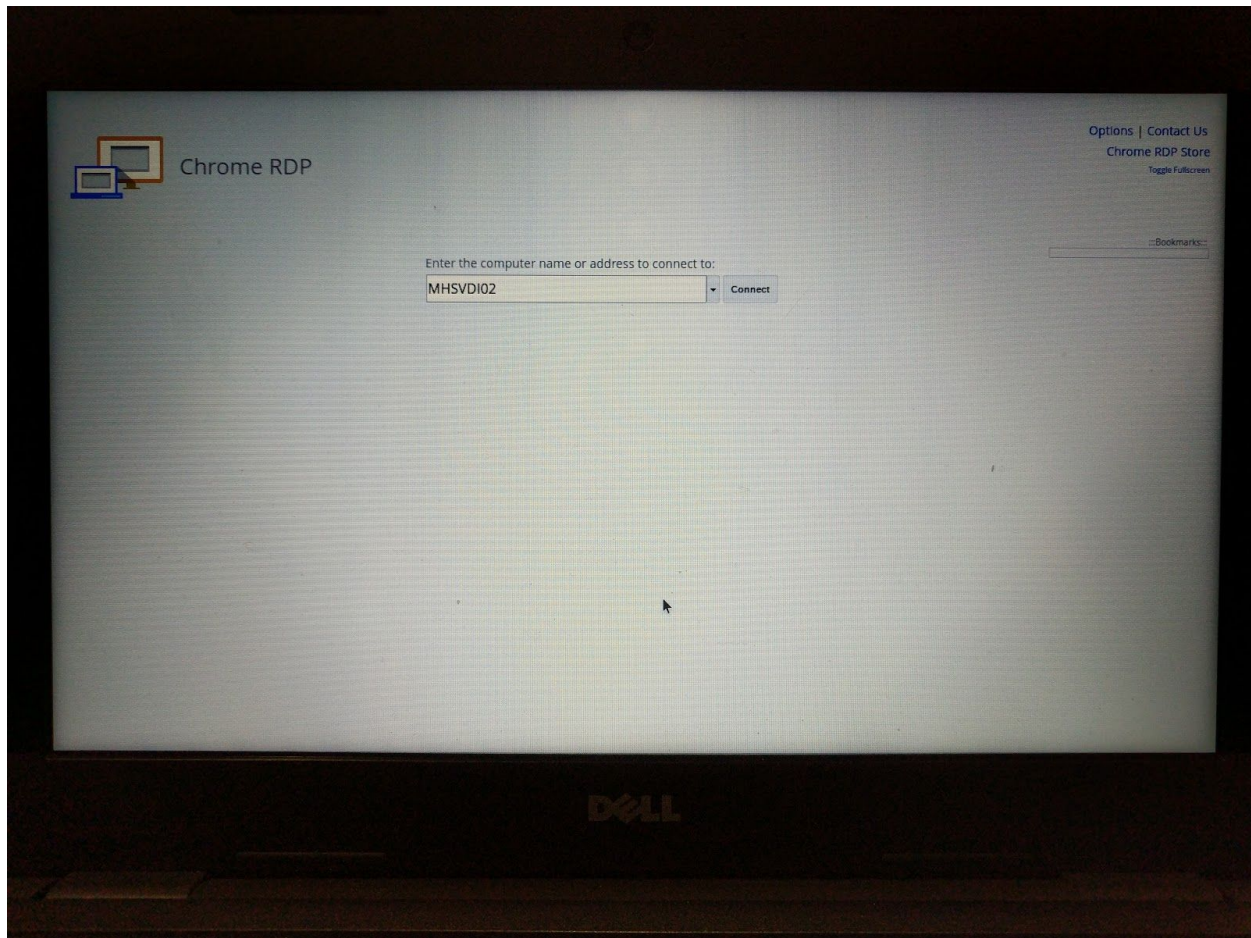

Using Remote Desktop

From a Chromebook

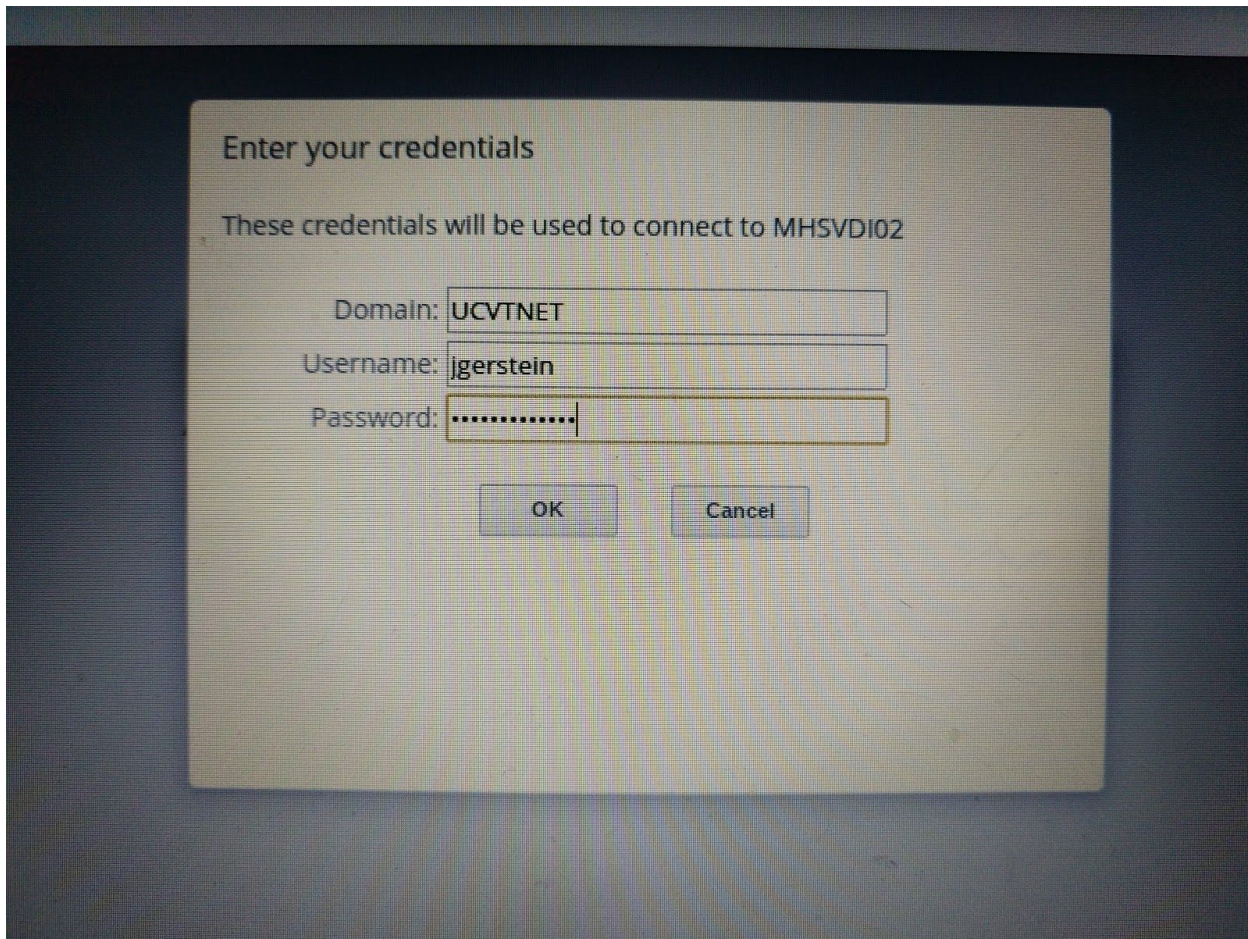

1. From the apps menu, choose "Chrome RDP"

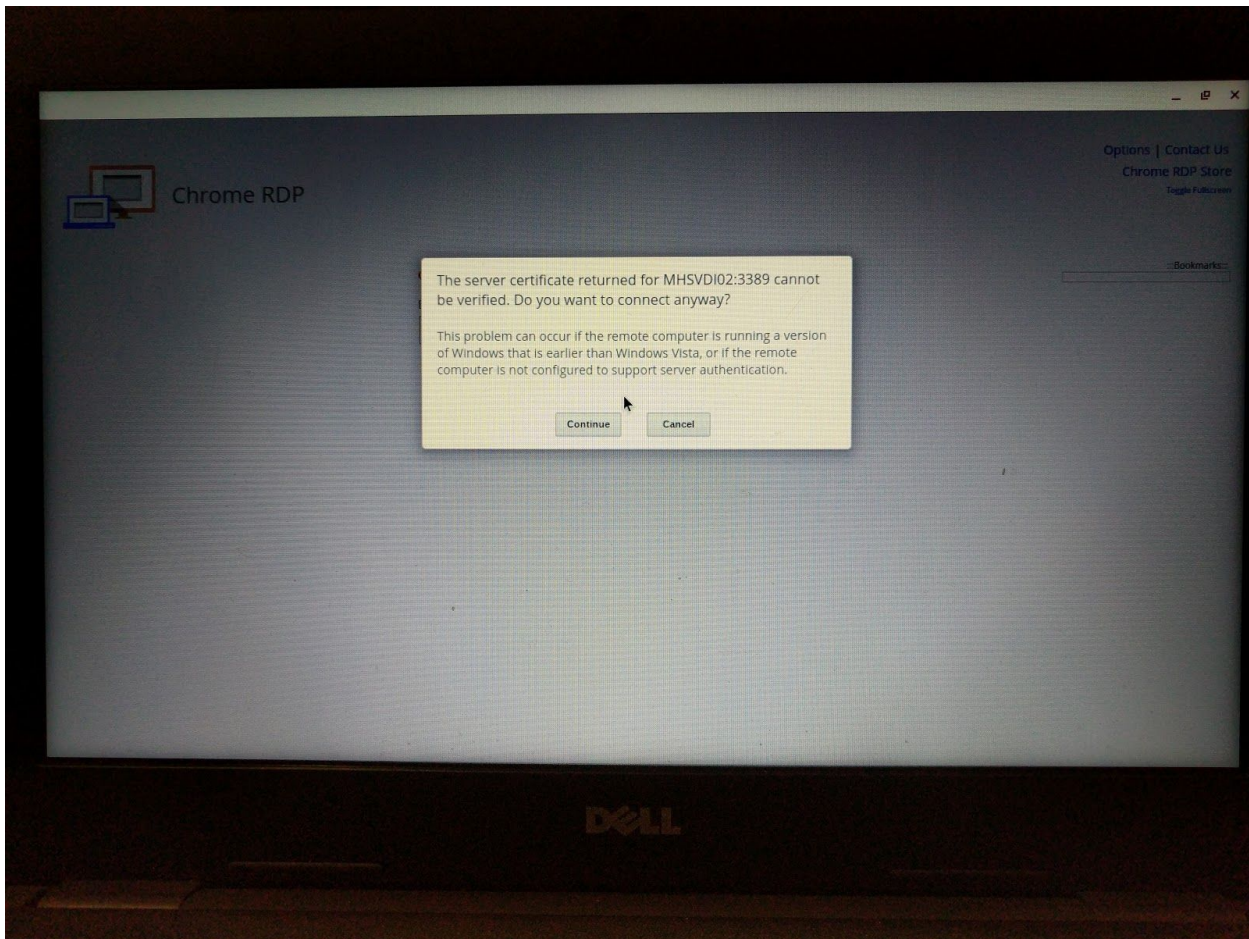

2. Maximize the window, then enter the computer name - UCTECH54.

3. Enter your login info. The domain is "UCVTNET" and the username and password are the same ones you normally log in with.

4. The first time you log in, you may get a warning that the server certificate can't be verified. It's okay, you can continue.

5. Congratulations, you're now using Windows on a Chromebook
6. The small arrow at the top of the screen will open a window allowing for you to disconnect, access the task manager, take screenshots, and more
